Delete Licensed Program - (DLTLICPGM) Zend Platform for i5/OS (ZENDCORE)

Applies To:

[Zend Core 2..x]
[IBM System i]

Overview

The Delete Licensed Program (DLTLICPGM) command is used with the i5/OS to delete all the objects that make up the licensed program.
When a change is made to any of the LP objects, an object is added to a library or a directory that is stamped as a part of the LP the delete license program command may fail at times.

Instructions

Perform a clean uninstall of Zend Platform for i5/OS

1. The Delete Licensed Program (DLTLICPGM) command, from an i5 command line:
   - DLTLICPGM remove the product 1ZCORE5 OPTION(1) from the system.
   - WRKOBJLCK OBJ(ZENDPLAT) OBJTYPE(*LIB)
   - DLTLICPGM LICPGM(1ZCORE5) OPTION(1)

> **Note:**
>
> Make sure the library ZENDPLAT is not locked by any other job including yours, except for the ZEND subsystem jobs. (i5_COMD, ZC_STR_PRN, ZENDCOREAP, ZSTRCLCNTR, ZSTRJAVAMW ZSTRMYSQL)

Complete these steps for a failed uninstall

1. From an i5 command line:
   - ENDSBS ZEND end the subsystem if active
   - WRKLIB ZENDPLAT select option 12 to work with library
   - WRKOBJPDM LIB(ZENDPLAT) OBJ(ZPLATI5) identify the object:
     - ZPLATI5 *PRDLOD Zend Platform - product load
   - Select option 4= delete - remove the product load.
   - DLTLIB ZENDPLAT
   - Remove or Rename the Zend platform directories */usr/local/Zend/Platform* & */usr/local/Zend/MySQL*
2. Rename the directories:
   - WRKLNK '/usr/local/zend' and select option 7 - rename the directory */Platform*
   - WRKLNK '/usr/local/zend' and select option 7 - rename the directory */MySQL*
3. Remove the directories:
   - CALL QP2TERM to start the PASE terminal shell
4. From the terminal shell enter the commands:
   - rm -rf /usr/local/zend/Platform
   - rm -rf /usr/local/zend/MySQL
5. You can use the following i5 commands as well to remove the product this step is the same as before to remove the directories:
   - QSYS/CD DIR(/)
   - QSYS/CALL PGM(QP2SHELL) PARM('/QOpenSys/usr/bin/ksh' 'rm -rf /usr/local/zend/Platform')
   - QSYS/CALL PGM(QP2SHELL) PARM('/QOpenSys/usr/bin/ksh' 'rm -rf /usr/local/zend/MySQL')
