

# IBM i Zend Server 7 - Unable to load dynamic library '/usr/local/zendsvr6/lib/php\_extensions/curl.so'

## Issue

This error is seen in the php.log file:

```
PHP Warning: PHP Startup: Unable to load dynamic library '/usr/local/zendsvr6/lib/php_extensions/curl.so' -  
0509-022 Cannot load module /usr/local/zendsvr6/lib/php_extensions/curl.so.  
0509-021 Additional errors occurred but are not reported. in Unknown on line 0
```

## Environment

Zend Server for IBM i version 7 running on any version of IBM i

## Resolution

This is just a warning error and may safely be ignored. It is easy to fix, though.

From a 5250 command line:

```
edtf '/usr/local/zendsvr6/etc/conf.d/curl.ini'
```

Find the first line in the file (usually the only line in the file):

```
extension=curl.so
```

Insert a semicolon in the first position and press enter to comment out the line:

```
;extension=curl.so
```

Use F3 twice to save and exit.

## Details

Starting with version 7, the curl extension is compiled into the core rather than loaded as a dynamic extension. However, the curl.ini file still has the line to load the [curl.so](#) module dynamically. This external module is no longer needed, so it does not exist. This causes the warning.
