

Generating a Support Tool Archive

The Support Tool gathers logs, configuration files, and setup information from the Zend Server instance. This data is used to help Zend's support team to troubleshoot issues, and provide comprehensive and efficient support.

The instructions to generate a Support Tool archive on all supported operating systems can be found below:

Linux and macOS

1. Run the following command in the terminal as 'root':

```
/usr/local/zend/bin/support_tool.sh
```

Note:

The script accepts options (add `--help` for the list), however, refrain from using `--full` and `--get-dbs`, unless the Support personnel asked for these options specifically.

2. The Support Tool archive will be created as `$TMPDIR/ZSST_<hostname>_<version>_<timestamp>.tar.gz` (if **TMPDIR** is not defined, it defaults to `/tmp`), for example:

```
[root@server ~]# /usr/local/zend/bin/support_tool.sh
Plugins :
  "Zend Server Database"
  "System Information"
  "System Overview"
  "HTML phpinfo() Collector"
  "Zend Server Logs Collector"
  "Zend Server Information"
Archive created at /tmp/ZSST_server_2019.0.3_2019-11-26-133805.tar.gz
[root@server ~]#
```

Windows

1. From the Start Menu, select **Zend Server | Support Tool**. On most systems you will receive a UAC prompt, which you'll have to accept.
2. Select the **Create Support Tool archive with these options** radio button (selected by default):

Zend Server 2019.0 Support Tool version 2019.0

Select Options Or Actions
Information to add to Support Tool or actions to perform

Select either the additional information types to include in the archive created by the Support Tool or an action to be performed.

Basic

☒ Create Support Tool archive with these Options:

- ☐ Full logs (by default only last 1000 lines)
- ☐ SQLite databases

☐ Perform this Action:

- ☐ Change the 'admin' password
- ☐ Switch to Simple Authentication
- ☐ Zend Server services:
 - ☐ Stop
 - ☐ Start

Note: Each of the Options above will increase the size of the generated archive.

Next > Cancel

Note:

Marking the **Full logs** and/or **SQLite databases** checkboxes may seem a good idea. However, in most cases this simply increases the size of the archive significantly without adding useful information. Please mark these checkboxes only when the Support personnel asked you to do so.

3. Press **Next**.

4. Enter a location for the archive to be created in:

Zend Server 2019.0 Support Tool version 2019.0

Location of the Support Tool Archive
Where would you like to save the generated archive?

Select the directory where the Support Tool archive will be saved.

C:\Users\admin\Desktop

Browse...

< Back Next > Cancel

5. Press **Next**.

6. The Support Tool archive will be created in the location specified in step 4:

IBM i

1. Log in with a *SECOFR class user profile and go to a 5250 command line.

2. Go to the Zend Server menu and run Support Tool:

2.1. On Zend Server **9.x and later**:

```
go zendphp7/zsmaint
```

Select option **"40. Run Support Tool"**

```
MAIN                                IBM i Main Menu                                System:  ZENDSUP1

Select one of the following:

    1. User tasks
    2. Office tasks
    3. General system tasks
    4. Files, libraries, and folders
    5. Programming
    6. Communications
    7. Define or change the system
    8. Problem handling
    9. Display a menu
   10. Information Assistant options
   11. IBM i Access tasks

   90. Sign off

Selection or command
==> go_zendphp7/zsmaint_

F3=Exit  F4=Prompt  F9=Retrieve  F12=Cancel  F13=Information Assistant
F23=Set initial menu
